GOING BACKWARDS ON CLIMATE CHANGE

8 MAY 2016

No more UK backtracking on climate!

Since May 2015 clean energy technology has been sidelined in favour of a dash for gas, insulation has been cut and fracking, roads and runways pushed forwards despite strong local opposition.

So what better way to mark the government's one year anniversary than to march - backwards - down Whitehall? A creative and colourful protest that will make a serious point: we're running out of time to act on climate change, and we can't afford to go backwards.

Join us 8 May: find out more at www.campaigncc.org

Going backwards... • Removing onshore wind subsidies • Massive cuts to solar funding • Making renewables pay additional taxes • Planning changes to block onshore wind • More planning changes to fast-track fracking • New tax breaks for fossil fuels • Scrapping the Green Deal for home insulation • Scrapping the Zero Carbon Homes target • Extravagant road-building plans • Proposed new runway opening up aviation expansion • Removing tax incentives to buy less-polluting cars
